

SCIENCE FOR THE FUTURE OF OUR PLANET

Planet Earth is a complex of interconnected systems, supporting an amazing diversity of life and feeding many billions of people. Learning more about these systems is critical for predicting where we are headed in the future.

Massive Open Online Course – Begins March 12, 2018
FREE MOOC available through Coursera!

Take an incredible journey around Planet Earth and beyond in this free online course! From soils and plants, to oceans and rainforests, the Moon, Mars and much more, this is an exciting opportunity for anyone interested in science. Gain novel insights and understanding as you learn from a team of UA Biosphere 2 scientists and connect with other participants from around the world.
